
Response to COVID-19 Free risk audit

**Risk management
simplified
from start to finish**

Quality Control Technology

We are a risk technology company

About us

We have been in business since 2015 and are the preferred audit and enterprise risk management partner for over 100 hospitals across Australia. We have offices located in Melbourne, Australia and Hong Kong.

Your response to COVID-19

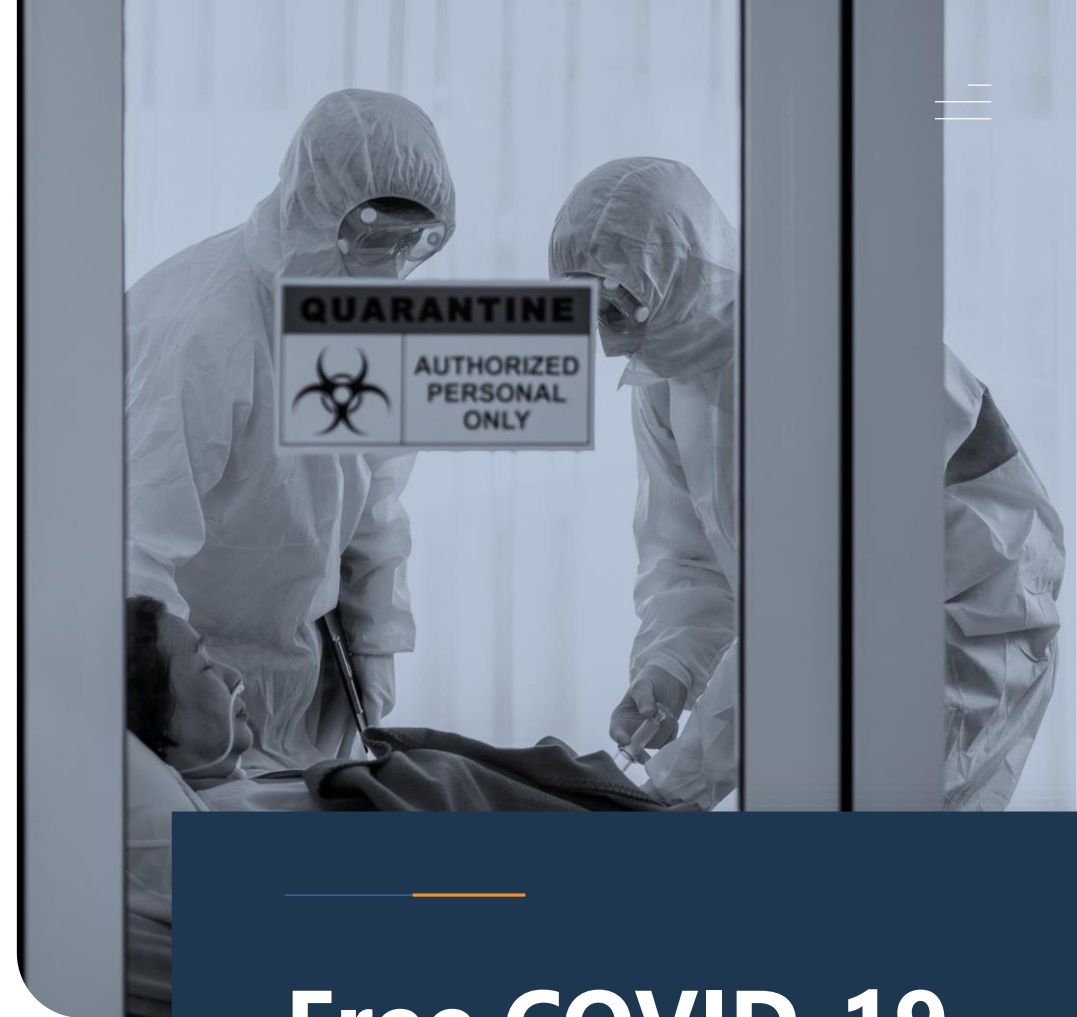

In an unprecedented time of uncertainty, we are confident that by working together and making audit risk software more accessible, we can help keep our communities safe and healthy through risk technology.

FREE

To support and help respond to the global COVID-19, Quality Control Technology are offering free use of our market leading audit and risk software to be used for staff health screening, visitor pre-screening Cleanliness and Infection Prevention and Control related audits.

Our team are working remotely however you can still expect to hear back from us within our industry leading response times.

Free COVID-19 risk audit

The QC Health Audit and Risk capability is best in market with 1st Line Assurance.

QC Health audits can be completely customized to meet your organisations needs and can be used on any device in your organisation. By utilizing the QC Health QR codes you can have hospital visitors use their own device to complete their pre-visit assessment.

The real value in QC Health is when assurance questions and outcomes within audits are linked to risk controls for automated testing as defined by the risk owner. This means that is a staff member identifies a high temperature when they test themselves before coming into the hospital an alert is sent in real time to the person or team responsible for making a call on whether the staff member should come in or self isolate.

QC Health

COVID-19 Audit Screening tools

This along with any of our audits can be accessed via a QR code; which would allow visitors to scan the code to gain direct access to the screening tool using their own devices if that is of use.

Staff Prescreening Tool;

Staff would pre-screen before coming in for a shift, if any risk factors are identified then a real time alert would be sent to the relevant risk owners identified in the organisation.

[Staff Prescreening Tool click here.](#)

Visitor Screening Tool;

Visitor pre-screening could be completed before allowing visitors entry onto wards or into facilities, if any risk factors are identified then a real time alert would be sent to the relevant risk owners identified in the organisation. Perhaps the executive team to follow up with a call and explain why they have been refused access to see their family members. Or medical team to follow up and assess if the visitor requires medical attention.
